

Towards the Holodeck

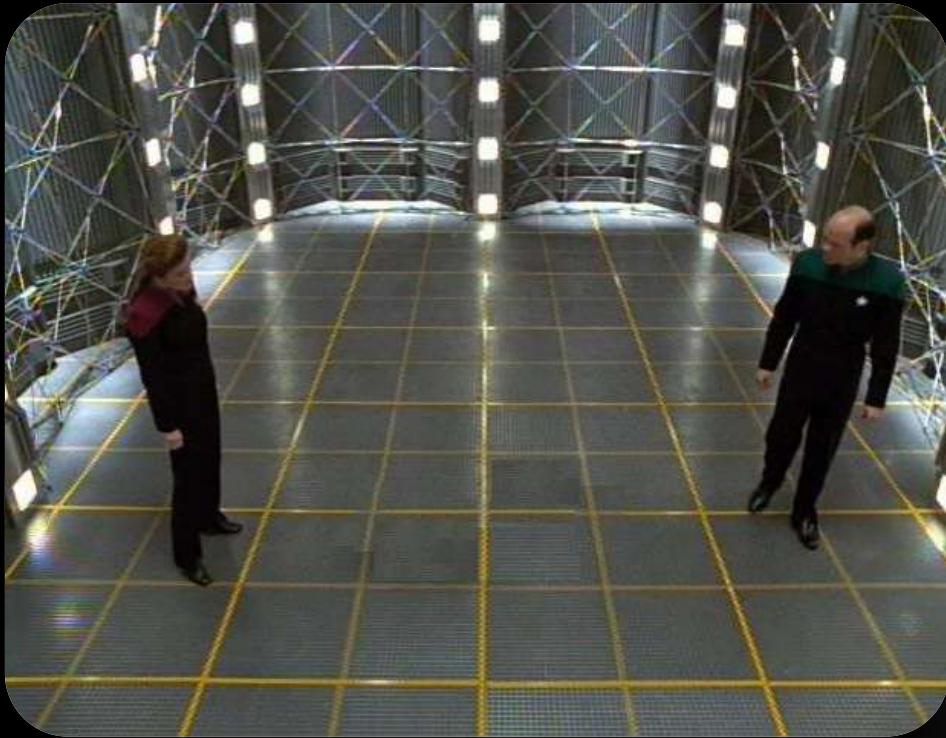

Fully Immersive Virtual Reality Visualisation
of Scientific and Engineering Data

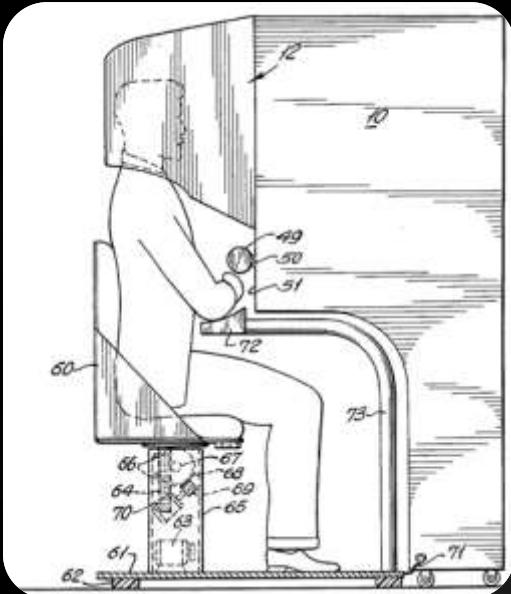

Stefan Marks
Javier E. Estevez
Andy M. Connor

The Gold-Standard

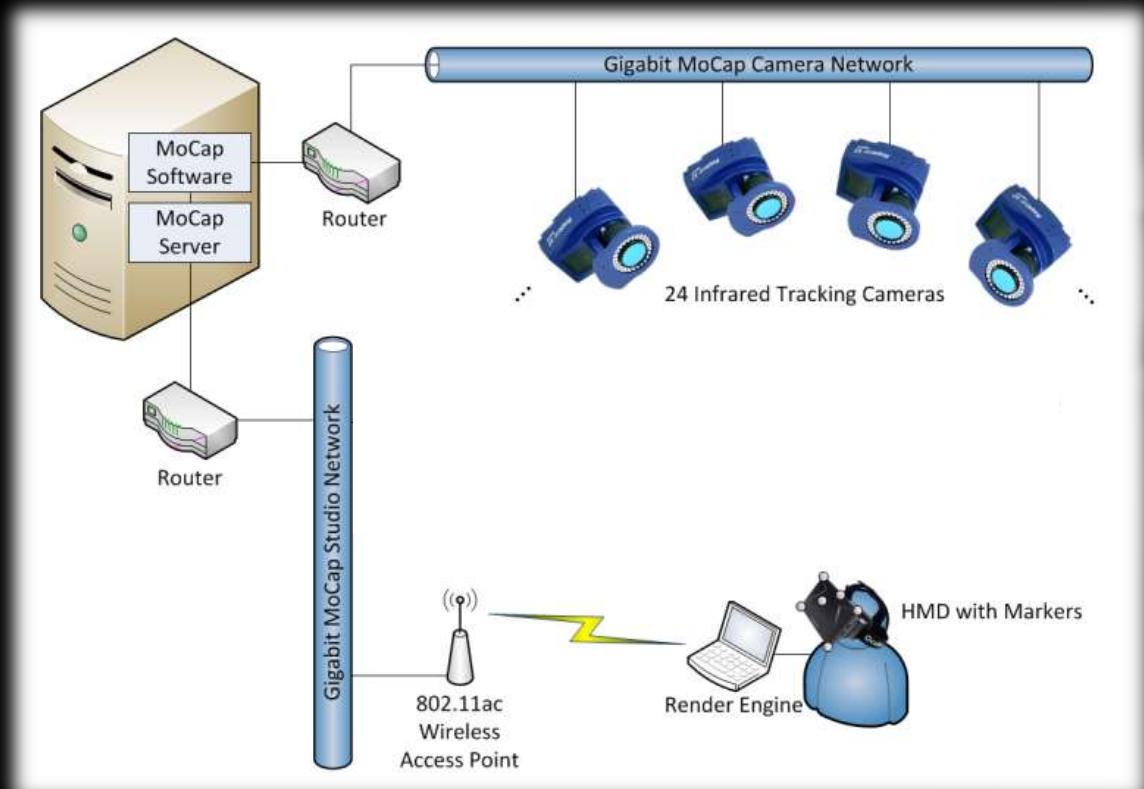

The Beginnings

The Current State

System Architecture vo.1

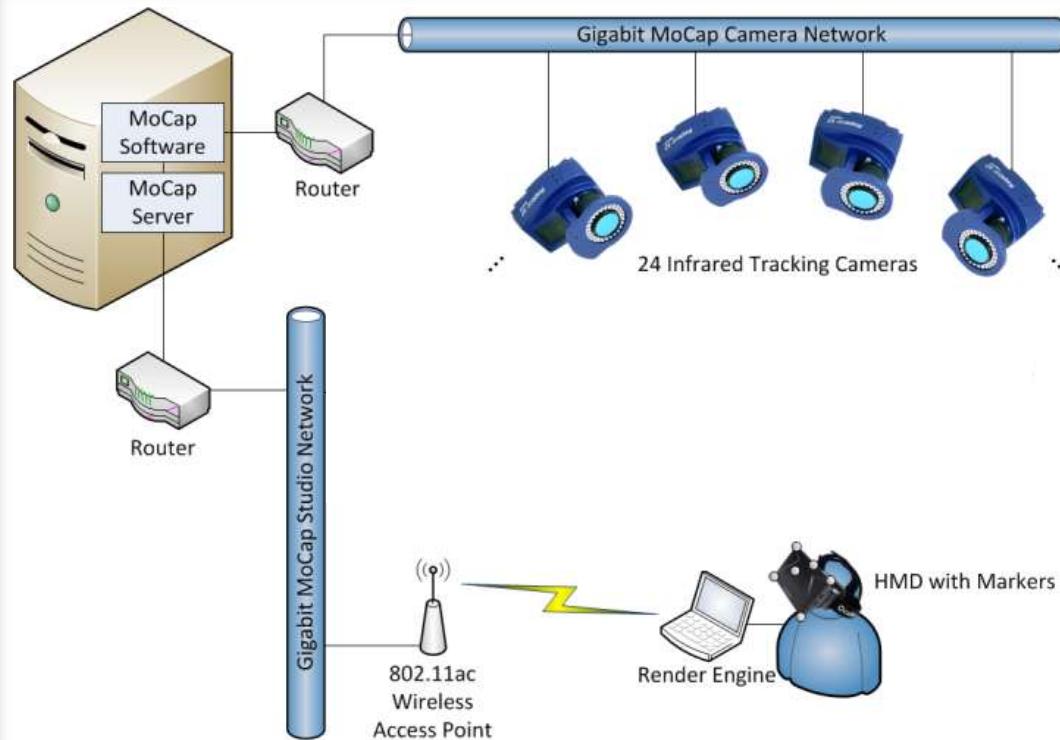

- Idea not new
e.g., CHIL,
Lockheed Martin

First Steps

System Architecture vo.2

Hardware

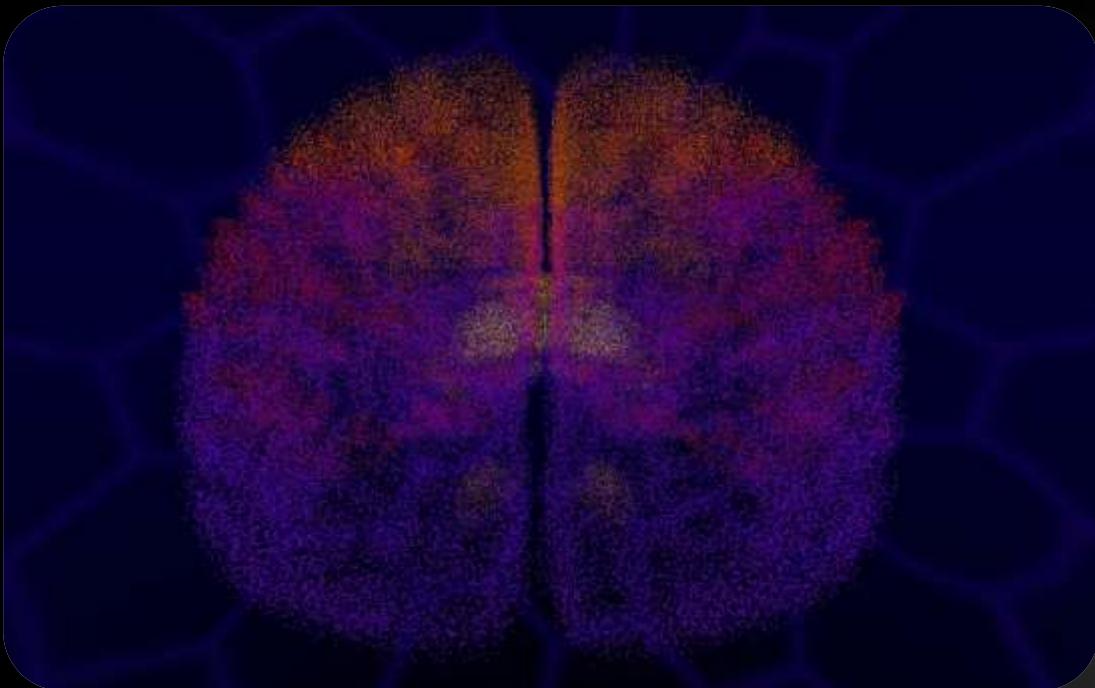

- Oculus Rift + Marker-Template
- Wireless HDMI
- Battery Pack

Hardware

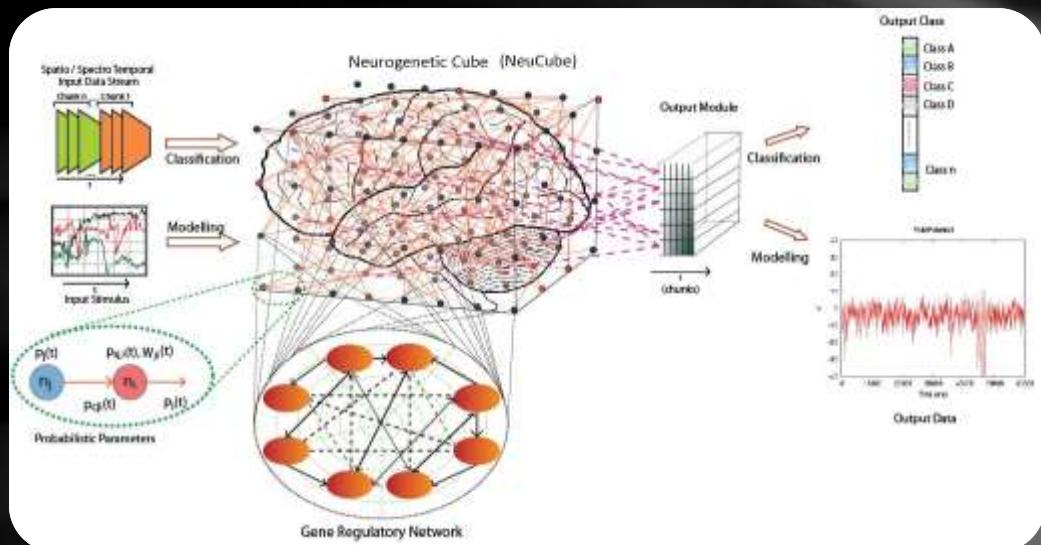

Usecase 1: KEDRI

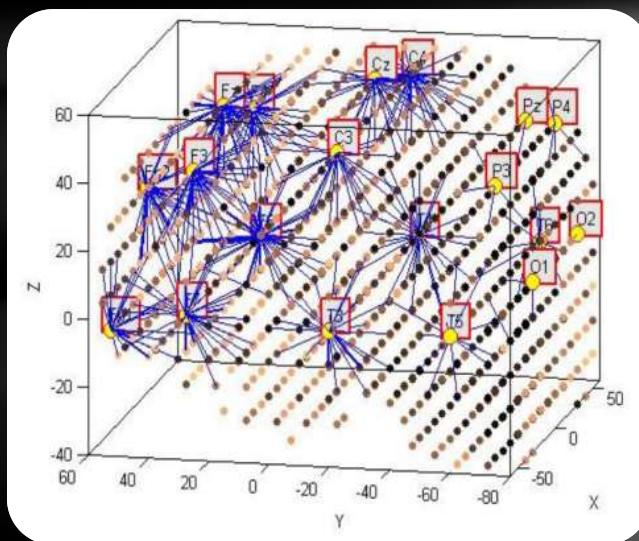

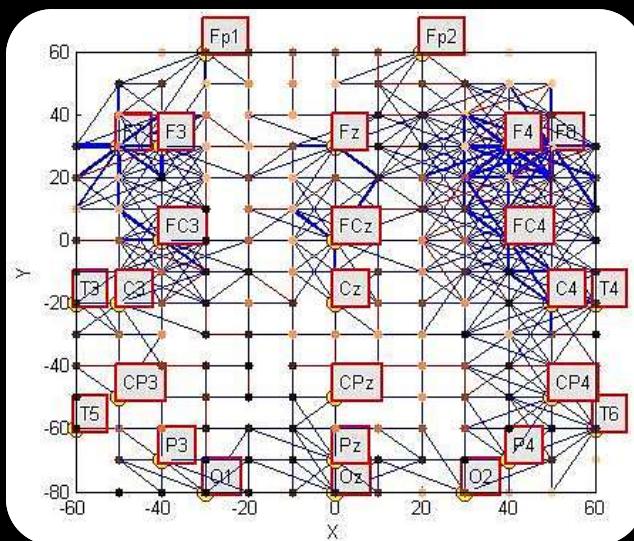

NeuCube

- Spiking Neural Network
- ~1400 Neurons/
4000 Connections
...and increasing
- Used for Classification
of EEG data,
fMRI data,
etc.

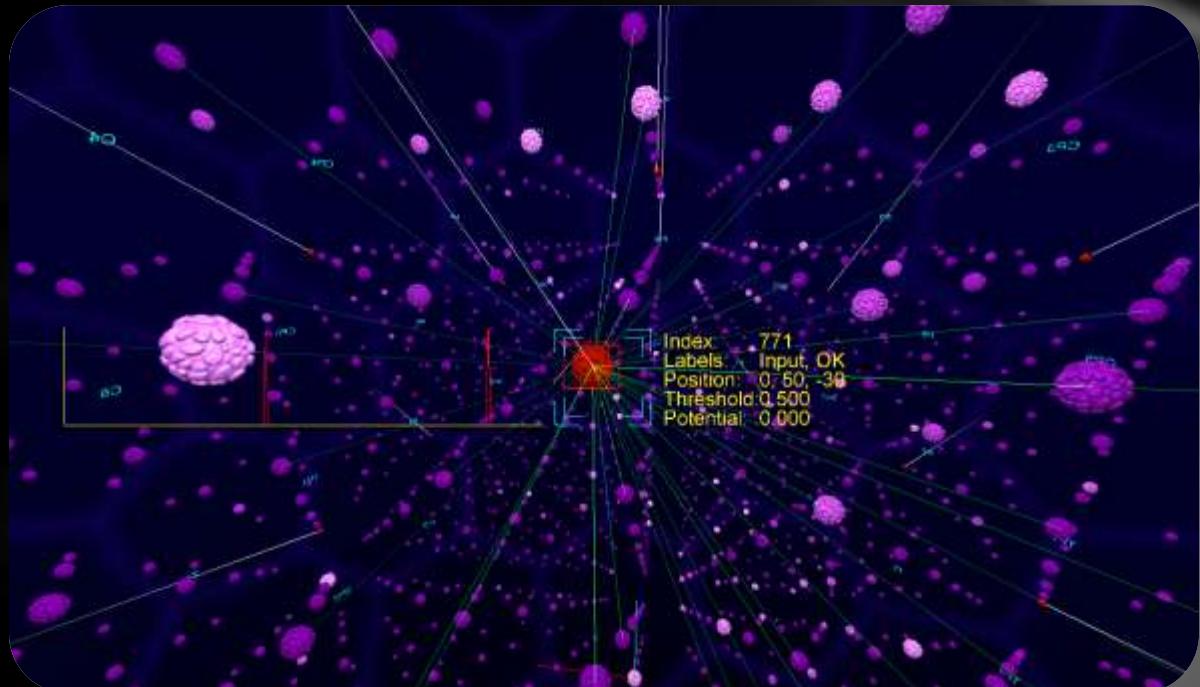

Problem

- Current Visualisation: In MatLab, No interaction

Service

- 3D
- “Walk Through”
- Interactive
 - Neuron detail
 - Time control
 - Comparison
 - ...

Usecase 2: Stimson Yachts

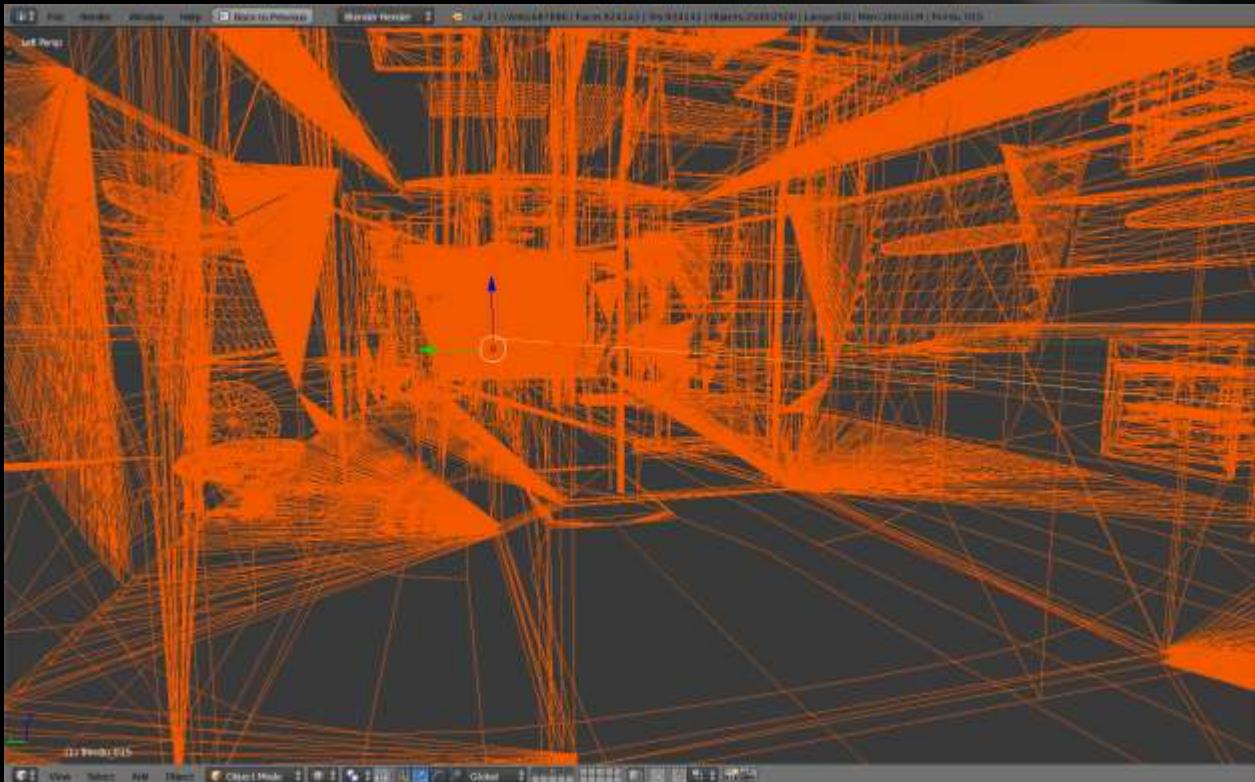

Service

- “Transfer-Pipeline” for CAD Model into the VR engine
- Rhino3D > OBJ > Blender > FBX > Unity 3D
- Visual inspection of design before building
- Commercial potential: showcasing to customers

Problems

- CAD vs. Game Engine
 - 670k Vertices
 - 925k Tris (w/o Rigging)
- Materials
- Logic

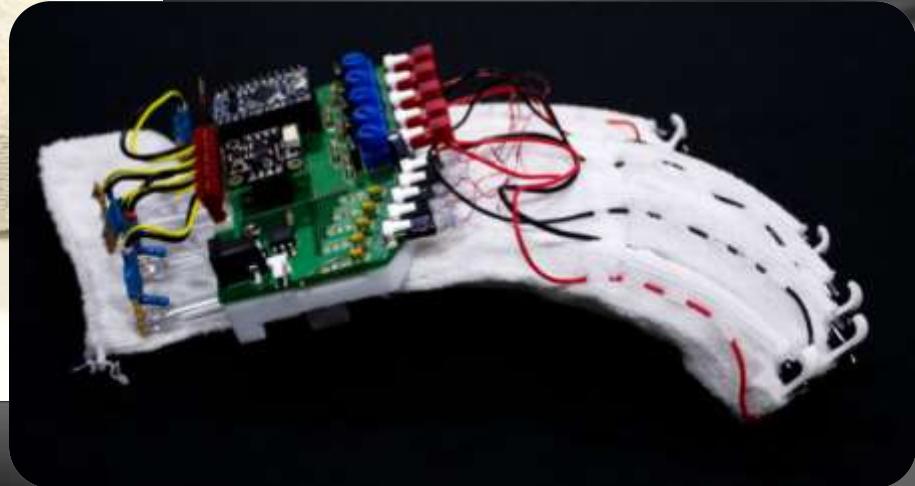

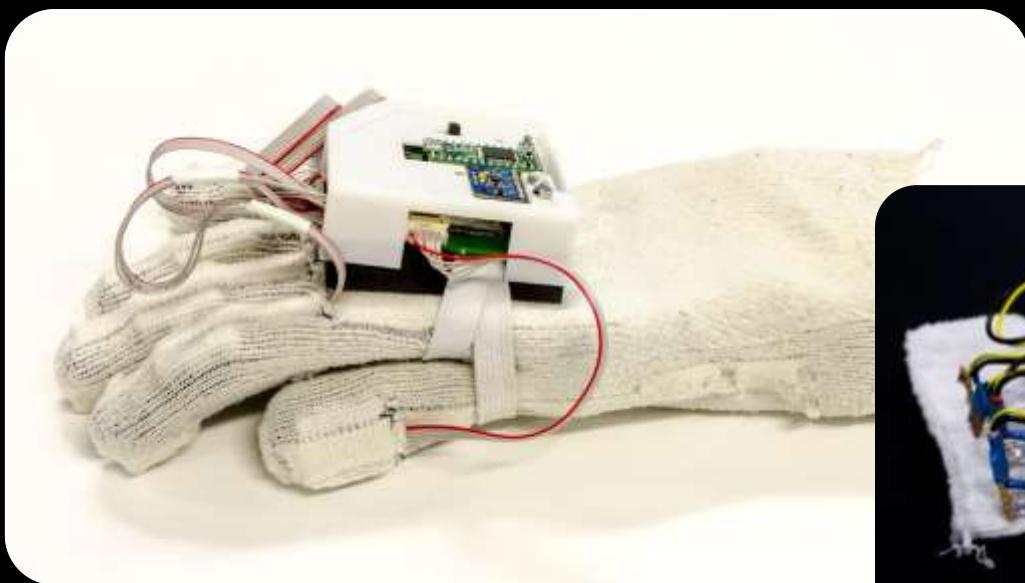

Future Work

- More Hardware
- More Usecases
 - Commercial
 - Artistic
- More Engines
 - Unreal, Blender,...
 - Realtime Raytracing

Haptic Glove

Realtime Raytracing

Questions, Watson?
