Volume 7 Number 2 (2006)

Connected metrizable subtopologies and partitions into copies of the Cantor set

I. Druzhinina

pp. 139-150

Maximal ballean

O. I. Protasova

pp. 151-163

Extension of Compact Operators from DF-spaces to $C(K)$ spaces

F. Garibay Bonales and R. Vera Mendoza

pp. 165-170

Almost periodic points of zero-dimensional semigroup actions

Y. Ge

pp. 171-176

Fuzzy uniformities on function spaces

J. K. Kohli and A. R. Prasannan

pp. 177-189

When is an ultracomplete space almost locally compact?

D. Jardón and V. V. Tkachuk

pp. 191-201

Generalized independent families and dense sets of Box-Product Spaces

W. Hu

pp. 203-209

On resolutions of linearly ordered spaces

A. Caserta, A. Giarlotta and S. Watson

pp. 211-231

A class of spaces containing all generalized absolutely closed (almost compact) spaces

J. K. Kohli and A. K. Das

pp. 233-244

Uniformly discrete hit-and-miss hypertopology. A missing link in hypertopologies

G. Di Maio, E. Meccariello and S. Naimpally

pp. 245-252

The ideal generated by s -nowhere dense sets

J. Cao and S. Greenwood

pp. 253-264
